

ARF-WL8-IN

Wireless input module

The wireless input module is used for monitoring one input circuit and sending information to the control panel

FEATURES:

- Programmable input for fire and security detectors, emergency button or specialized detectors
- Bi-directional wireless communication
- Fully intelligent
- 10-year battery life
- Self-optimizing wireless frequency and amplitude algorithms
- Operating temperature range: $-10\text{ }^{\circ}\text{C}$ to $+55\text{ }^{\circ}\text{C}$

The product complies with the requirements of the EN54-18:2005, EN54-25:2008 standards
